Title:

Food Delivery System

Descriptions:

Users can order foods from restaurants and ask them deliver to the addresses(Home, school, office...). So users can enjoy foods without walking out.

Functionally:

- Users can sign up with their addresses and phone number.
- Users can log in
- Users can search the nearby restaurants
- Users can view the menus of the restaurants
- Users can make order
- Users can check the status(Is restaurant accept the order or not)
- Users can cancel the order
- Users can write a review for the restaurant
-
- Restaurant can upload a dish with image
- Restaurant can change the status(Opening, busy, closed....)

Stretch functionally:

- System can recommend dishes to users
- System can rank the restaurant by some kind of criterion
